Immunomodulatory effects of BRAF and MEK inhibitors: Implications for Melanoma therapy

Marvin Kuske[a,d,e,1], Dana Westphal[a,b,d,1], Rebekka Wehner[c,d], Marc Schmitz[c,d], Stefan Beissert[a,d,e], Christian Praetorius[a,b,2], Friedegund Meier[a,d,e,2,*]

Immunological effects of BRAFi and MEKi.

effects			BRAFi BRAF-mutant	MEKi BRAF wild-type	BRAFi + MEKi BRAF-mutant
microenvironment	*in vitro*	immune stimulatory molecules and cytokines	↑ restoration of IL-12 and TNFα production of DCs [30]; ↑ i.a. CD40, CD70, CD83 [22]		↑ [22]
		immunosuppressive cytokines	↓ IL-1 A, IL-8 [22]; ↓ IL-6, IL-10 [30]		↓ [22]; ↓ GRO, IL-8 [36]
	in vivo	immunosuppressive cytokines	↓ [37]		↓ [37]
		Tregs and MDSCs	↓ [26,40,41]	↓ MDSC by ↓ differentiation MDSCs and ↓ osteopontin [42]	
		immune stimulatory molecules and cytokines and regulatory chemokine	↑ CD40 L, ↑ IFNγ [26]; ↓ CCL2 [39]		
		maturation of APCs	↑ [26], restoration of (IL-12 and TNFα) and surface marker expression (CD80, CD83, and CD86) in DCs [29]		
tumor infiltration of immune cells	*in vitro*	VEGF expression	↓ [30,36]	↓ VEGF [36]	↓ [36]
	in vivo	tumor T cell infiltrate	↑ [37,44,45,46,49]	↑ tumor-infiltrating $CD8^+$ T cells as a result of protection from death caused by chronic TCR stimulation [24]	↑ [37]
		VEGF expression	↓ [44]		
		NK cells	↑ [39]		
better recognition of melanoma cells	*in vitro*	melanoma antigen expression	↑ [21,37]	↑ [21,22]	
		expression of HLA I and/or HLA II	↑ [22,32]	↑ [22,48]	↑ [22]
	in vivo	melanoma antigen expression	↑ [37]		↑ [37]
improved activity of immune effector cells	*in vitro*	reactivity of T lymphocytes	↑ (measured by IFNγ release) [21,26]		
	in vivo	T cell cytotoxicity	↑ (perforin, granzyme B) [37]		↑ (perforin, granzyme B) [37]

Immunomodulatory effects of BRAF and MEK inhibitors: Implications for Melanoma therapy

Marvin Kuske[a,d,e,1], Dana Westphal[a,b,d,1], Rebekka Wehner[c,d], Marc Schmitz[c,d], Stefan Beissert[a,d,e], Christian Praetorius[a,b,2], Friedegund Meier[a,d,e,2,*]

Synergistic effects of combining MAPK inhibitors with immune checkpoint inhibitors (preclinical data).

effect on		BRAFi +/- MEKi + Checkpoint-I BRAF-mutant	MEKi + Checkpoint-I BRAF wild-type
tumor regression (Superior to single agents)		yes [19,50]	yes [22]
microenvironment	immunosuppressive cytokines		↓ [22]
tumor infiltration of T cells	tumor T cell infiltrate	↑ [19,49]	↑ [22]
better recognition of melanoma cells	melanoma antigen expression	↑ [19]	
	HLA class II		↑ [22]
improved activity of effector T cells	T cell cytotoxicity	↑ [19]	
	reactivity of T lymphocytes	↑ production of granzyme B, IFNγ and TNFα [49]

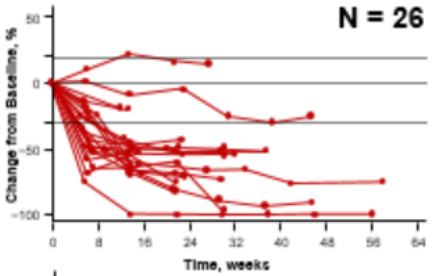
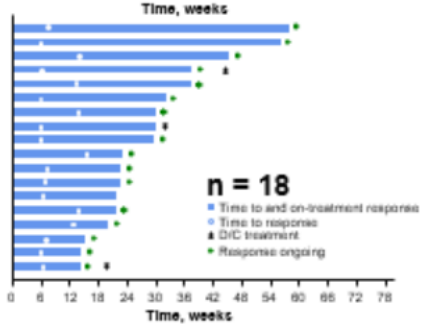
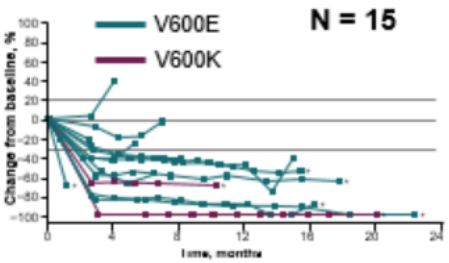
Clinical Trials Combining BRAFi + MEKi + Anti–PD-1/L1

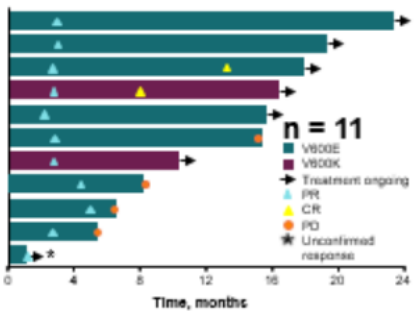
Dabrafenib + Trametinib + Durvalumab[1]



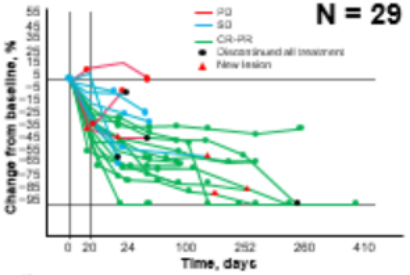


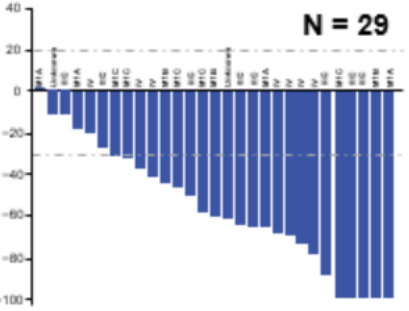
Dabrafenib + Trametinib + Pembrolizumab[2,3]



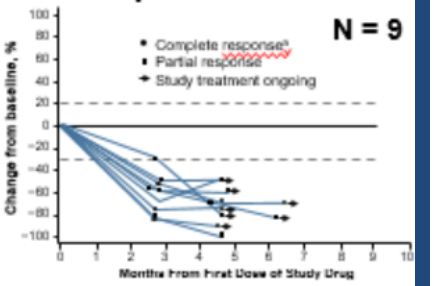


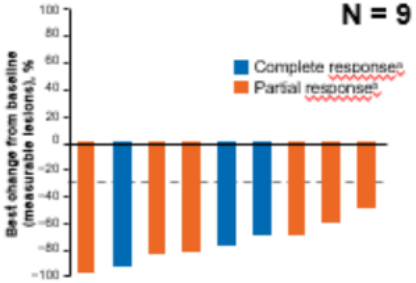
Vemurafenib + Cobimetinib + Atezolizumab[4]





Dabrafenib + Trametinib + Spartalizumab[5]





BRAFi, BRAF inhibitor; CR, complete response; D/C, discontinued; MEKi, MEK inhibitor; PD, progressive disease; PR, partial response; SD, stable disease; SLD, sum of lesion diameters. [a] Patients with CR and < 100% change in sum of diameters (SOD) have (a) 100% change in non-nodal target lesions and all nodal target lesions are < 10 mm and (b) CR for nontarget lesions. [b] Patients with PR and 100% change in SOD have (a) 100% change in all target lesions and (b) non-CR/non-PD response for nontarget lesions.

1er Taller Anual Sobre Manejo del Melanoma

P3: 1804057580

COMBI-i Part 2: Biomarker Cohort

N ~ 20

- Unresectable or metastatic melanoma
- *BRAF* V600 mutation
- Previously untreated
- No active brain metastasis
- ECOG PS ≤ 2
- A total of ≥ 2 cutaneous or subcutaneous lesions or nodal lesions for tumor sample collection

Screening → **Spartalizumab (PDR001) 400 mg Q4W + dabrafenib 150 mg BID + trametinib 2 mg QD** → PD^{RECIST} or unacceptable toxicity

	S	Day 1	2-4 weeks	8-12 weeks	PD
Tumor biopsy (FFPE) for biomarker analysis	✕		✕	✕	✕
Blood/plasma for biomarker analysis	✕	✕	✕	✕	✕

Primary endpoint: change in PD-L1 levels and $CD8^+$ cells upon treatment

Secondary endpoints: safety, PFS, OS, ORR, DOR, DCR, and PK

BID, twice daily; CD, cluster of differentiation; DCR, disease control rate; DOR, duration of response; ECOG PS, Eastern Cooperative Oncology Group performance status; FFPE, formalin-fixed, paraffin-embedded; ORR, overall response rate; OS, overall survival; PFS, progression-free survival; PK, pharmacokinetics; QD, once daily; RECIST, Response Evaluation Criteria in Solid Tumors; S, screening.

PRESENTED AT AACR 2018.

Instituto Nacional de Oncología y Radiobiología

1er Taller Anual Sobre Manejo del Melanoma

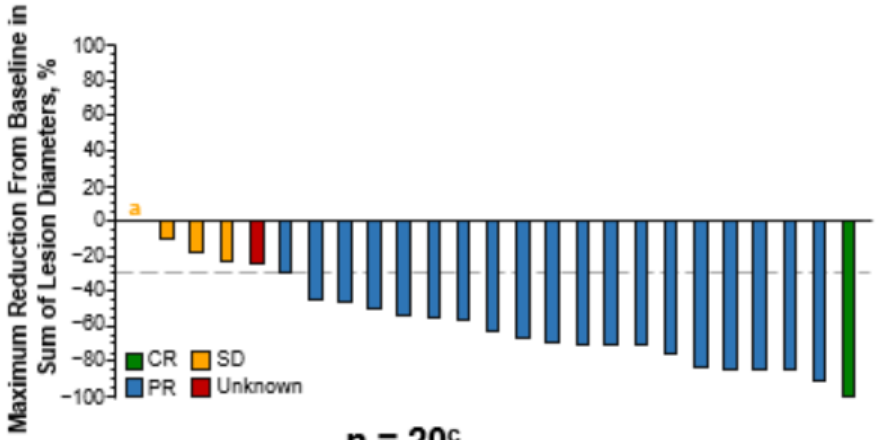
Sample Assays

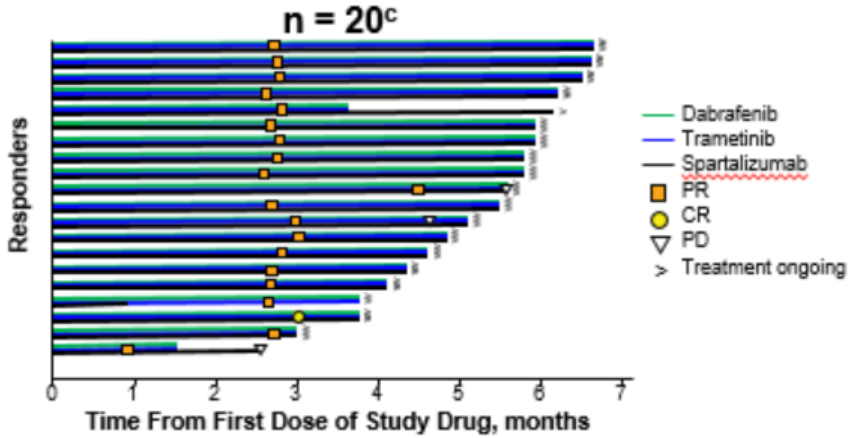
- **Tissue:**
  - Immunohistochemistry: CD8, PD-L1 (Dako 28-8), LAG-3, TIM-3, CD163, FOXP3
    - PD-L1 assessed using MEL score (membrane staining in tumor and tumor-associated immune cells); MEL score ≥ 2 = PD-L1+
- **PBMC + plasma:**
  - Flow cytometry
    - Myeloid-derived suppressor cell (MDSC) panel
  - Plasma cytokine profiling
    - 45-marker Meso Scale Discovery (MSD) immunoassay panel

FOXP3, forkhead box protein P3; LAG-3; lymphocyte activation gene 3 protein; PBMC, peripheral blood mononuclear cells.

P3: 1804057580

RECIST v1.1 Best Response (unconfirmed)





Evaluable for Analysis	N = 25[b]
Best response, n (%)	
CR	1 (4)
PR	19 (76)
SD	4 (16)
Unknown	1 (4)
PD	0
Overall response rate, %	**80**
95% CI	59-93

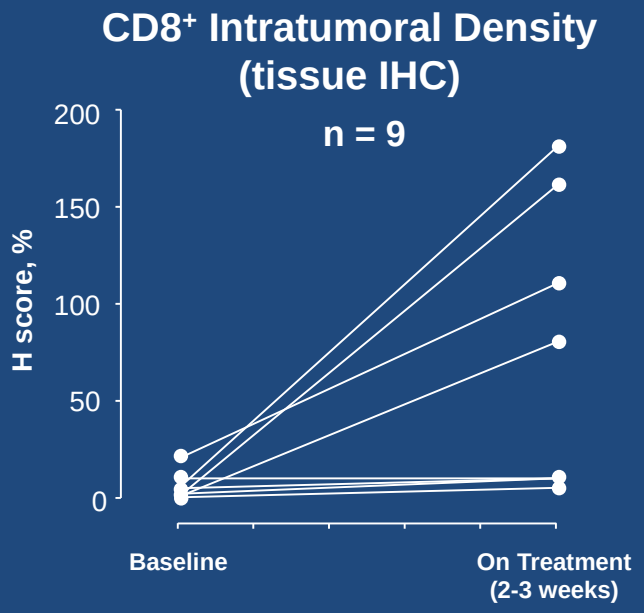
- At data cutoff, 14 patients had ≥ 2 post-baseline assessments (10 patients with confirmed response)

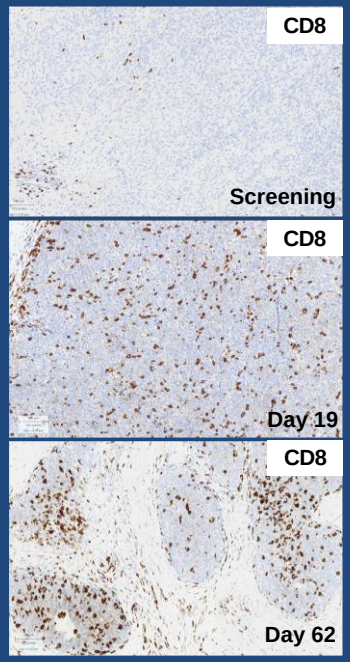
Dashed line at −30% represents cutoff for response per RECIST v1.1. [a] Patient had best change from baseline of 0%. [b] 2 patients without ≥ 1 postbaseline assessment were excluded from this analysis. [c] Includes patients with unconfirmed PR or CR.

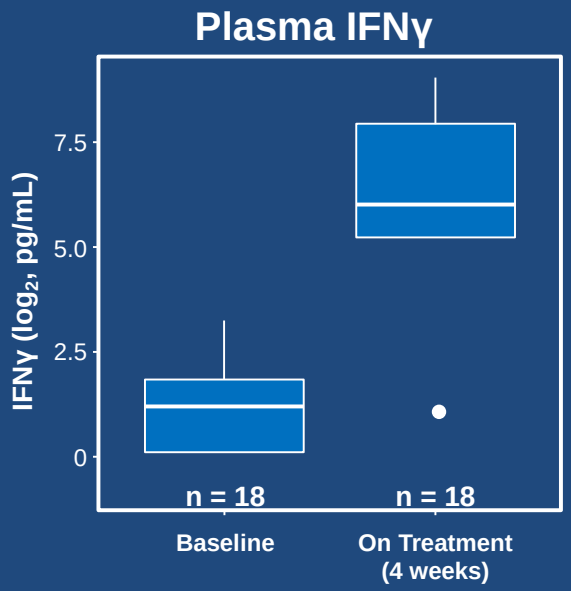
PRESENTED AT AACR 2018.

P3: 1804057580

Evidence of Immune Activation After Treatment







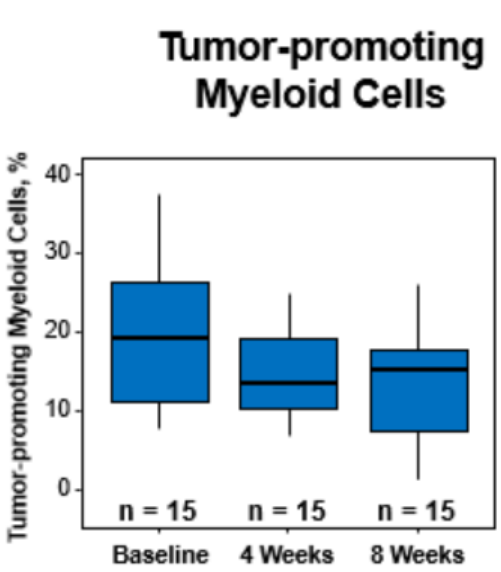
- Increase in intratumoral CD8+ cells based on exploratory H-score analysis
- All patients showed elevated IFNγ levels in plasma upon treatment

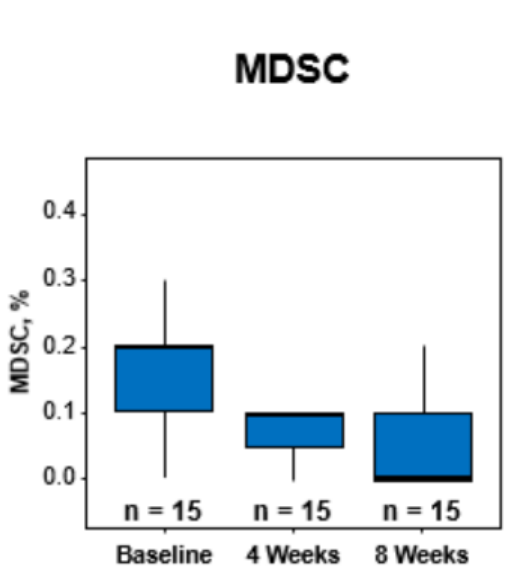
IFNγ, interferon-gamma; IHC, immunohistochemistry.

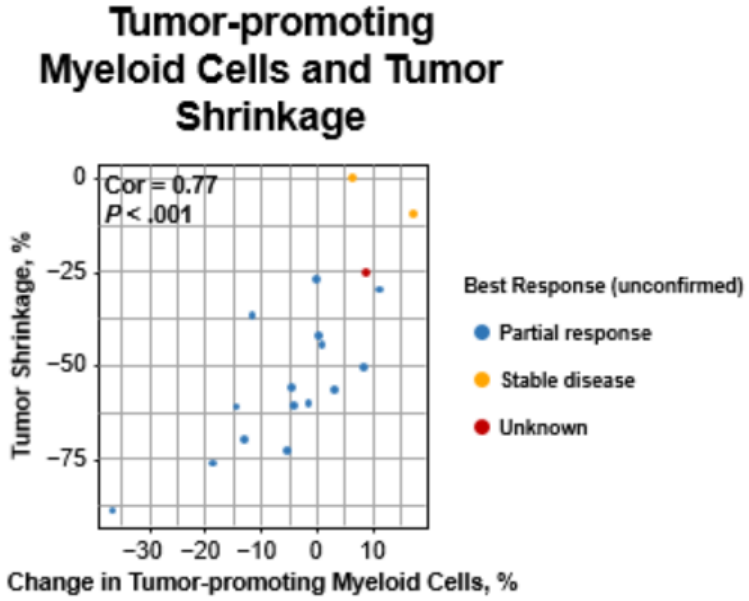
PRESENTED AT AACR 2018.

P3: 1804057580

On-Treatment Modulation of Tumor-promoting Myeloid Cells/MDSC







- A decrease in tumor-promoting myeloid cells and MDSC ($Lin^{-}CD11b^{+}CD33^{+}$) was observed, indicating that the environment became less suppressive
- Changes in tumor-promoting myeloid cells following treatment were correlated with tumor shrinkage

Instituto Nacional de Oncología y Radiobiología

1er Taller Anual Sobre Manejo del Melanoma

P3: 1804057580

Summary of Adverse Events

Category, n (%)	N = 27 All Grades	N = 27 Grade ≥ 3
AE	27 (100)	13 (48)
Treatment related	27 (100)	9 (33)
SAE	10 (37)	5 (19)
Treatment related	9 (33)	4 (15)
AE leading to discontinuation		
All 3 study drugs	0	0
Spartalizumab only	2 (7)	2 (7)
Dabrafenib/trametinib only	3 (11)	2 (7)
AE leading to dose adjustment/interruption	24 (89)	12 (44)
Fatal AE[a]	1 (4)	1 (4)
Treatment related	0	0

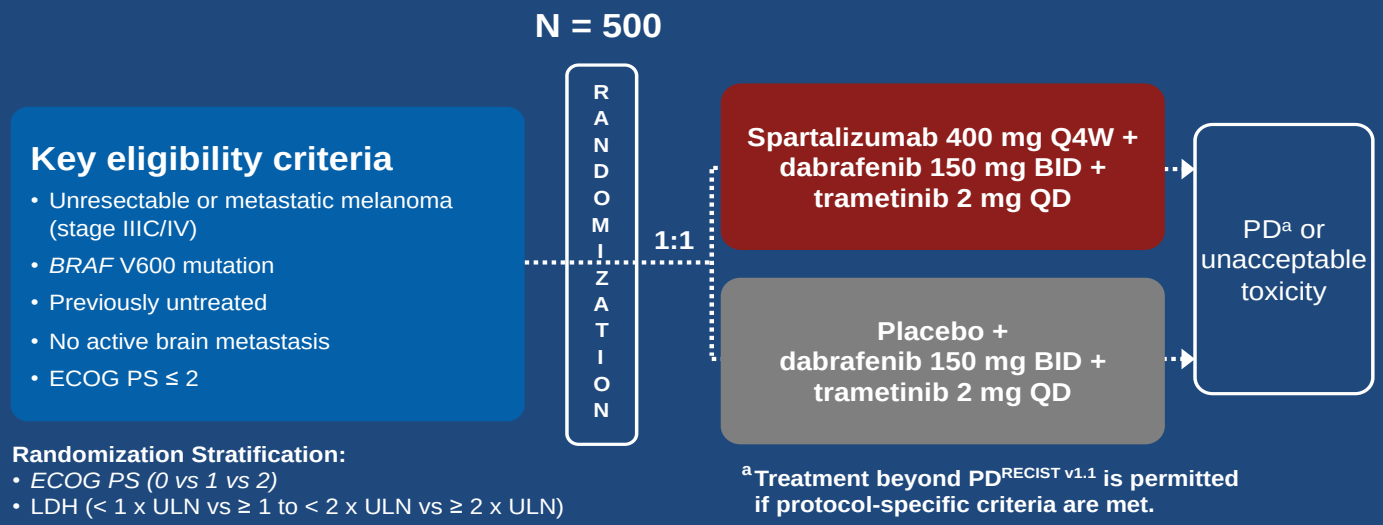
- **2 patients discontinued spartalizumab only:**
  Grade 3 hepatic enzyme increased (onset, day 34; resolving); grade 3 rash (day 139; resolving)
- **3 patients discontinued dabrafenib and trametinib only:**
  Grade 2 acute kidney injury (day 113; not resolved); grade 3 rhabdomyolysis (day 27; resolving); grade 3 hepatic enzyme increased (day 111; resolved)

AE, adverse events; SAE, serious adverse events.
[a] 74-year-old man. Adverse events: septic shock, pseudomonas sepsis, cardiac arrest (fatal).

PRESENTED AT AACR 2018.

P3: 1804057580

COMBI-i Part 3: Randomized, Double Blind, Placebo Controlled



Randomization Stratification:
- *ECOG PS (0 vs 1 vs 2)*
- LDH (< 1 x ULN vs ≥ 1 to < 2 x ULN vs ≥ 2 x ULN)

[a]**Treatment beyond PD$^{RECIST\ v1.1}$ is permitted if protocol-specific criteria are met.**

Primary endpoint: PFS$^{RECIST\ v1.1}$

Secondary endpoints: OS, ORR, DOR, DCR, safety, PRO, PK

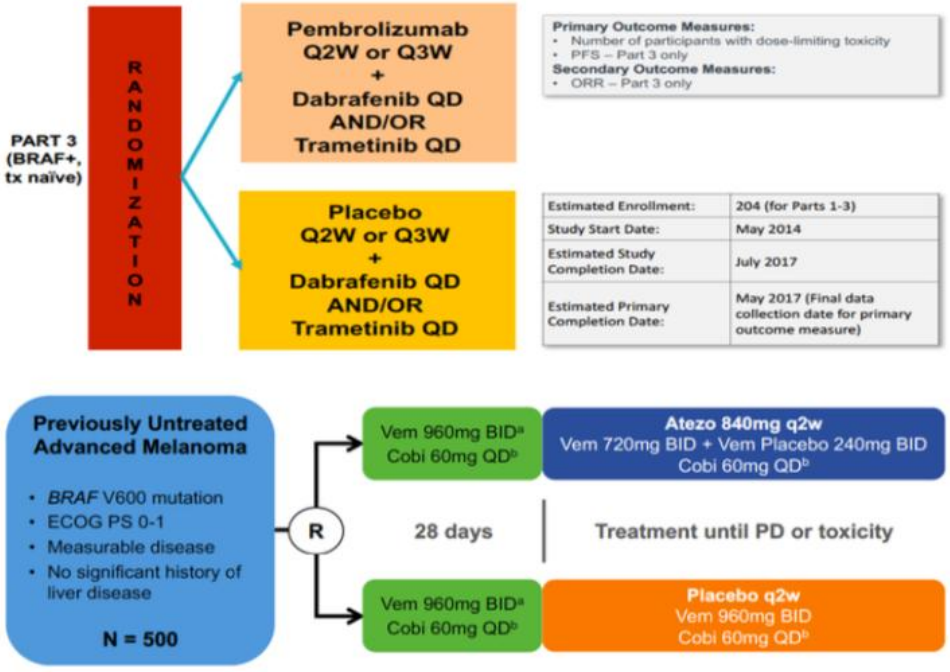
PRO, patient-reported outcomes; ULN, upper limit of normal.

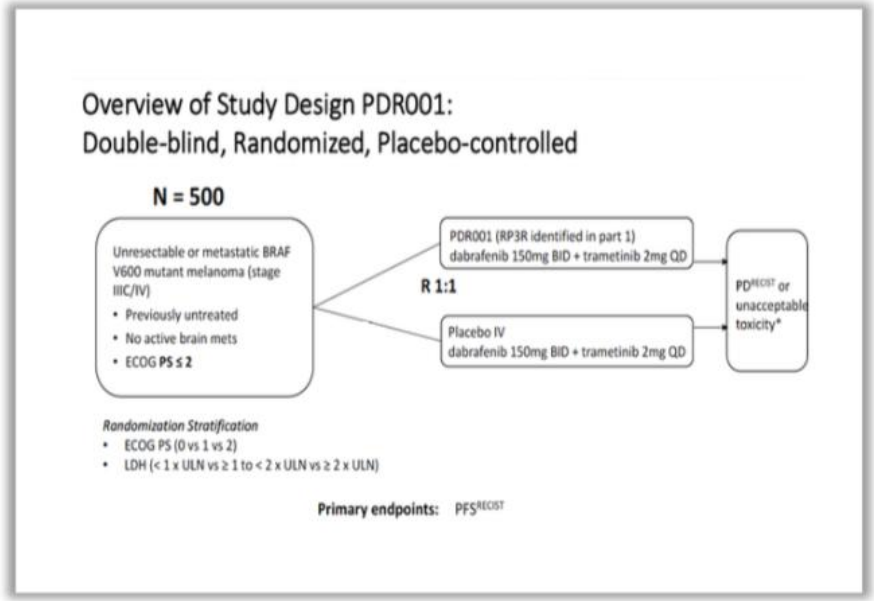
PRESENTED AT AACR 2018.

Instituto Nacional de Oncología y Radiobiología

1er Taller Anual Sobre Manejo del Melanoma

Phase II-III clinical trials BRAF/MEKi + Anti-PD-1/PDL-1





- **Key study objectives**
  - Primary: investigator-assessed PFS
  - Secondary: PFS (IRF-assessed), OS, ORR, DOR, Safety, PK

A Phase III, Open-Label, Multicenter, Two Arm, Randomized Study to Investigate the Efficacy and Safety of Cobimetinib Plus Atezolizumab Versus Pembrolizumab in Patients With Previously Untreated Advanced BRAF V600 Wild-Type Melanoma

P3: 1810061949

KEYNOTE-022 Part 3 Study Design (NCT02130466)

Patients

- Histologically confirmed unresectable or metastatic stage IV *BRAF*$^{V600E/K}$-mutant melanoma
- No prior therapy
- Measurable disease
- ECOG PS 0/1

Stratification factors[a]

- ECOG PS (0 vs 1)
- LDH level (>1.1 × ULN vs ≤1.1 × ULN)

R (1:1)
N = 120

N = 60 → Pembrolizumab 2 mg/kg Q3W + Dabrafenib 150 mg BID + Trametinib 2 mg QD

N = 60 → Placebo Q3W + Dabrafenib 150 mg BID + Trametinib 2 mg QD

- Primary end point: PFS
- Secondary end points: ORR, duration of response, and OS
- Data cutoff: Feb 15, 2018

[a]Owing to the small number of patients enrolled in the ECOG PS 1 and LDH ≤1.1 × ULN strata, these strata were combined.

[a]Includes BRAF inhibitors or MEK inhibitors.
[b]Carboplatin, paclitaxel, and 1 unspecified chemotherapy.

P3: 1810061949

Summary of Adverse Events

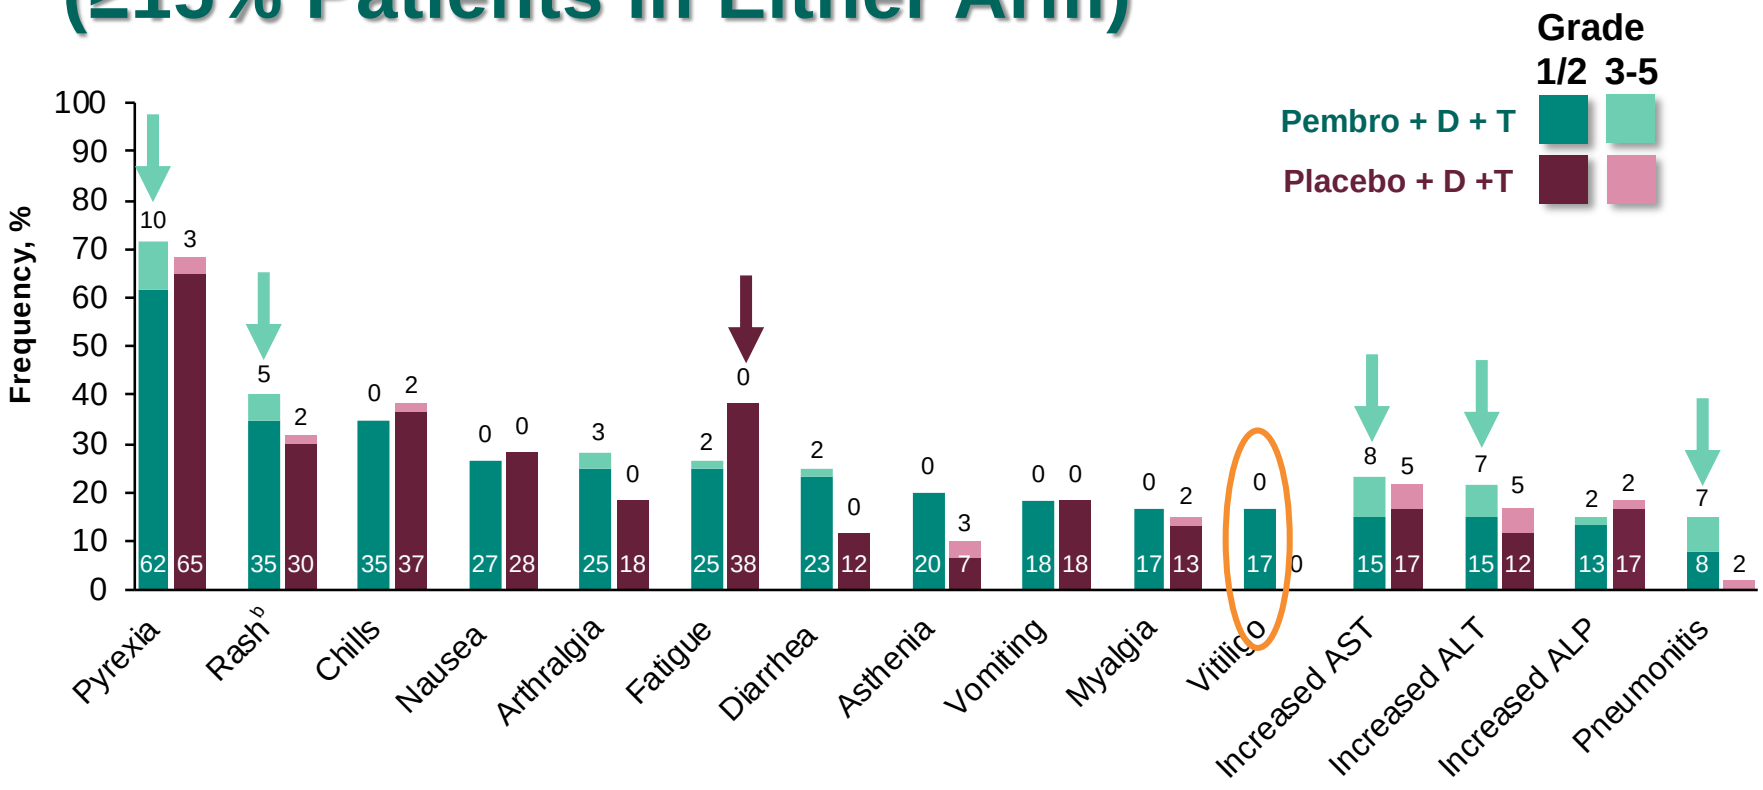
	Pembro + D + T n (%) N = 60	Placebo + D + T n (%) N = 60
Any-grade AE	59 (98)	58 (97)
Grade 3-4	40 (67)	27 (45)
Led to death[a]	2 (3)	0 (0)
Led to discontinuation	25 (42)	13 (22)
Led to discontinuation of all 3 study drugs	15 (25)	9 (15)
Treatment-related AE	57 (95)	56 (93)
Grade 3-4	34 (57)	16 (27)
Led to death	1 (2)	0 (0)
Led to discontinuation of ≥1 study drug	24 (40)	12 (20)

[a]One patient died due to treatment-related pneumonitis and one died of unknown cause.
Data cutoff: Feb 15, 2018.

Median follow-up: 9.6 months (range, 2.7-23.4 months)

P3: 1810061949

Treatment-Related Adverse Events[a] (≥15% Patients in Either Arm)



[a]Frequency indicated at the base of columns for grade 1/2 treatment-related adverse events, on top of the column for grade 3-5 events.
[b]Rash and maculopapular rash.
Data cutoff: Feb 15, 2018.

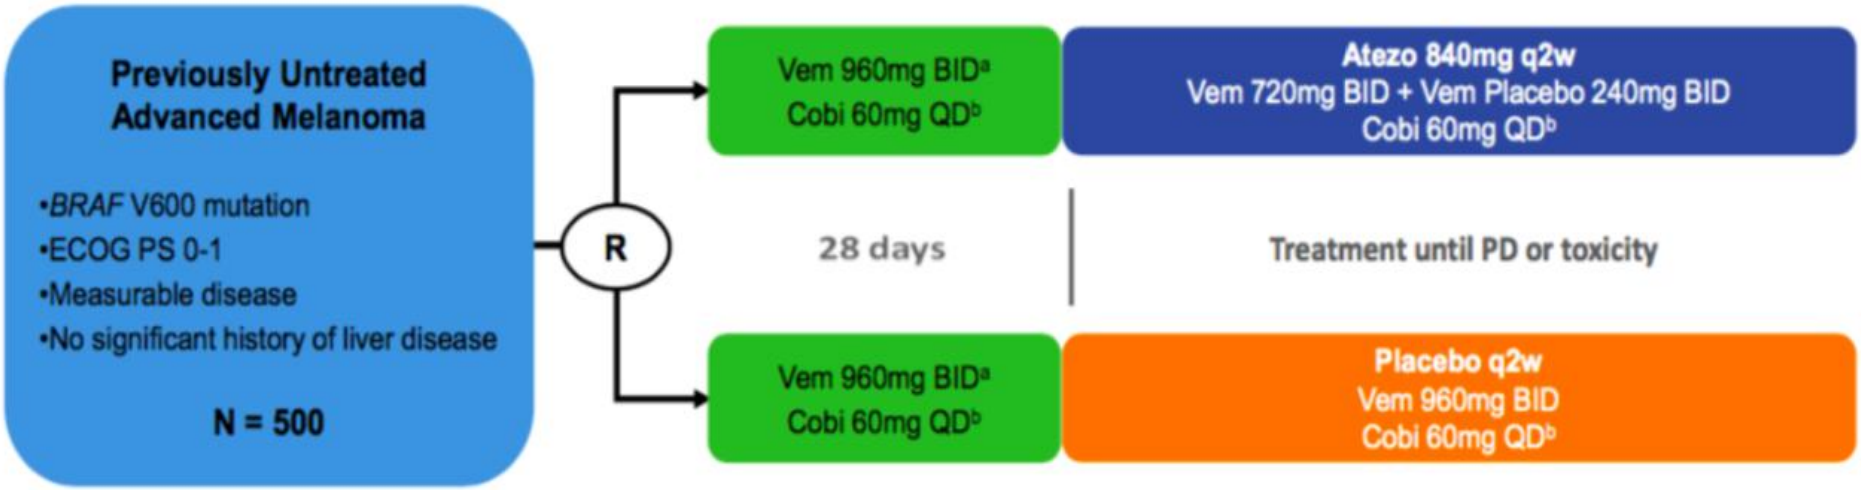
1er Taller Anual Sobre Manejo del Melanoma

Phase III Study of Atezo + Cobi + Vem in *BRAF* V600 Mutant Melanoma (NCT02908672)

- A Phase III study evaluating atezo + cobi + vem vs placebo + cobi + vem in patients with ***BRAF* V600 mutant** advanced melanoma is planned



- **Key study objectives**
  - Primary: investigator-assessed PFS
  - Secondary: PFS (IRF-assessed), OS, ORR, DOR, Safety, PK

Instituto Nacional de Oncología y Radiobiología

1er Taller Anual Sobre Manejo del Melanoma

TRICOTEL study

Atezolizumab, cobimetinib and vemurafenib in metastatic melanoma

Key inclusion criteria:
- ≥18 years of age
- Unresectable stage IIIC/IV metatstatic melanoma
- Documented *BRAF*^{V600} status of melanoma tumour tissue
- No prior WBRT
- Radiologically confirmed CNS metastases
- Adequate organ function
- ECOG PS 0–2

N=120

Study entry

Cobimetinib + atezolizumab *BRAF*wt

Cobimetinib + vemurafenib + atezolizumab *BRAF*mut

Progression

Primary endpoint:
- Intracranial response rate as per IRC

Secondary endpoints:
- PFS, DOR, CBR, OS, PRO, safety

1er Taller Anual Sobre Manejo del Melanoma

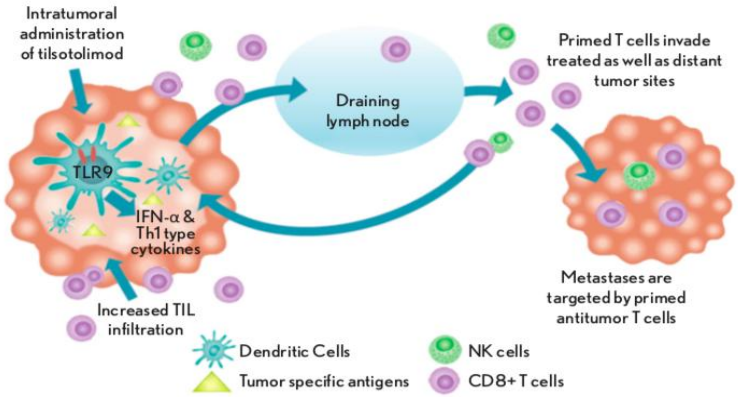
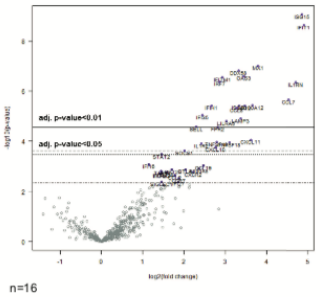
The safety and efficacy of intratumoral injection of the TLR9 agonist tilsotolimod (IMO-2125) in combination with ipilimumab in patients with PD-1 inhibitor refractory metastatic melanoma: An analysis of efficacy in injected and uninjected lesions



Best overall tumor response	Response rate (RECIST v1.1)
Complete response (CR)*	2 (10%)
Partial response (PR)	6 (29%)
Stable disease (SD)	7 (33%)
Progressive disease (PD)	6 (29%)
Overall response rate (CR, uCR, or PR)	8 (38%)
Disease control rate (CR, uCR, PR, or SD)	15 (71%)

Induction of type 1 IFN response gene signature at 24 hours after tilsotolimod



Responses seen in HLA-ABC neg/low tumors at baseline (indicated by red box)

1er Taller Anual Sobre Manejo del Melanoma

Abstract: 1306TiP

A randomized phase 3 comparison of IMO-2125 with ipilimumab versus ipilimumab alone in subjects with anti-PD-1 refractory melanoma

Illuminate 301 Study Design (N=308)

308 adult subjects with unresectable or metastatic melanoma with confirmed radiologic progression during or after PD-1 inhibitor therapy who

- were ≥21 days from the most recent anti-PD-1 treatment and underwent no intervening systemic treatment
- underwent no prior ipilimumab treatment except adjuvant
- underwent no BRAF+ treatment or else declined it
- had no ocular melanoma

1:1 randomization stratification:

- Anti-PD-1 therapy for ≥12 or <12 wk
- Stage M1c or other metastasis
- BRAF mutation status and prior targeted therapy: wild type, mutation positive with targeted therapy, or mutation positive with no prior targeted therapy
- No crossover

Arm A

Ipilimumab 3 mg/kg (4 doses: wk 1, 4, 7, 10)

Disease assessments

- Baseline
- Week 12
- Every 8 wk during first year, then
- Every 12 wk

Arm B

Ipilimumab 3 mg/kg (4 doses: wk 2, 5, 8, 11)

plus

Intratumoral tilsotolimod 8 mg (9 doses: wk 1, 2, 3, 5, 8, 11, 16, 20, 24)

Active follow-up if there is no disease progression or new cancer treatment

Survival follow-up if there is disease progression or new cancer treatment

Active follow-up if there is no disease progression or new cancer treatment

Survival follow-up if there is disease progression or new cancer treatment

Primary endpoints

- Overall survival (HR, 0.63)
- Overall response rate*

*Using Response Evaluation Criteria in Solid Tumors (RECIST), v1.1
